

## Park & Ski mit SKIDATA

Your parking lot is indeed a lot more than a welcome start-off point for a glorious day of skiing. Discover the possibilities of transforming your parking spaces into a profit generating service. Simple, straightforward implementation, thanks to SKIDATA know-how and technology Parking space is a gold mine.

### Parking space is a gold mine

- **Make profitable use of your parking lot**  
Paid parking not only helps to de-clutter the area and improve earnings, it also allows for attractive guest service combo packages.
- **System is paid for by non-guests**  
Offer your guests reserved parking and top-up your earnings with paid parking for non-guests.

### Innovative offers

- **Building up resort value**  
Generate additional value for your ski resort: one ticket for skiing and parking.

### Compatible systems

- **Easy integration**  
SKIDATA combines latest technology for ski resort and parking management.
- **Contactless technologies**  
SKIDATA keycards with built-in RFID chip serve as a universal electronic key.

### Smart management

- **Boosting turnover**  
Combine your ski resort and parking management to unlock new marketing potential and improve your earnings.

## Properties

### Functions

- The RFID tickets used to access the lifts can double as a free or discounted parking permit.
- To be eligible, the ticket must actually be used at the lift(s).
- Free or discounted parking also requires leaving the parking lot on the same day that the ticket is used at the lifts.
- Long-term tickets (e.g., season passes) only enable free parking on the days when they are used at the lifts.
- Non-guests (e.g., hikers) must pay for using the parking facilities.
- Exit permissions can be granted for all ticket types and can be configured as needed.

### Procedure

- Upon arrival, guests take a short-term ticket at the parking lot gate.
- They either already own a ski pass or purchase one at the ticket window.
- They then proceed to use the ticket with the resort's lift facilities.
- The registration details are relayed automatically from the lift to the SKIDATA parking system.
- This causes the ticket to be assigned the permission to leave the parking lot.
- After returning from the slopes, guests can leave the parking lot without the need to pay or have their ticket validated.

## Standard Version

- System interface between Freemotion.Logic and APT450.Logic or Parking.Logic.

## Technical Specifications

### System Requirements

APT450.Logic V21 or higher,  
Parking.Logic V4 or higher with add-on software modules  
'External Card Systems' and 'Hostcom'  
Freemotion.Logic V19 or higher

### Supported Data Carriers

keycard basic, -unlimited, -advanced, -iso-dual, -iso, -Eco iso-dual, -125  
keyticket light, -iso-dual  
Keywrist unlimited, -iso, -125  
Keyring unlimited, -125  
(SKIDATA Chip ID: 1, 8, 25, 26, 29, 30)
